CONTRACTOR LEADS: WEEKLY SEO REPORT

Technical SEO, Indexation, Content Strategy & System Architecture

WEBSITE DOMAIN: contractorleads.us (www.contractorleads.us)

REPORTING PERIOD: Week Ending October 23, 2026

PRIMARY ACCOUNT: devsynxoffical@gmail.com

TARGET MARKET: United States (B2B Lead Generation for Agencies)

1. EXECUTIVE SUMMARY

During the current reporting week, contractorleads.us underwent a comprehensive technical, architectural, and on-page SEO transformation. The platform was successfully restructured from a preliminary web interface into a high-authority B2B lead generation search ecosystem designed to capture marketing agencies, media buyers, and sales teams that sell services to home-service contractors.

KEY ACCOMPLISHMENTS THIS WEEK

- **Dual Google Search Console Verification:** Installed and verified dual ownership tokens directly in the root layout HTML metadata.
- **Indexation Architecture (200+ Pages):** Configured a structured sitemap index with over 200 state-by-industry landers enriched with localized market data blocks.
- **Critical Production Fix:** Resolved a Next.js 16 build blocker by switching to the Webpack compiler, eliminating production 404 errors on money pages.
- **Enterprise JSON-LD Structured Data:** Deployed complete Schema.org standards across all core templates.
- **High-Intent Content Engine:** Published 2 comprehensive Pillar Guides and 7 Topic Clusters addressing over 60,000 monthly US search queries.
- **Answer Engine Optimization (AEO/GEO):** Standardized public/llms.txt and direct-answer formatting for AI engines like Perplexity, ChatGPT, and Google AI Overviews.
- **OpenSEO Tool Suite Setup:** Integrated OpenSEO MCP server and installed 13 specialized automated agent skills.

2. GOOGLE SEARCH CONSOLE SETUP & INDEXING (200+ PAGES)

2.1 Domain Canonicalization & Ownership Verification

To eliminate split link-equity and duplicate content issues, the primary marketing origin was strictly locked to **https://www.contractorleads.us**. Apex requests from contractorleads.us and preview hostnames now receive an immediate HTTP 308 permanent redirect.

Google Search Console ownership was verified for devsynxoffical@gmail.com using dual HTML verification tags embedded into src/app/layout.tsx:

- Verification Tag 1: dZYfxmRoYeQR6PX6wCHtNz_sZ1HsDUMjXBUeh8UmQBY
- Verification Tag 2: TyqXl7_dlFkiT-2tH8-iodrv1XIdFCXk349h199738Y

2.2 Modular Sitemap Index Architecture

A modular sitemap index was deployed at /sitemap.xml to accelerate GoogleBot discovery and provide clean segmentation for indexation monitoring:

SITEMAP ENDPOINT	URL COUNT	TARGET SCOPE	INDEX PRIORITY
/sitemap-core.xml	10 URLs	Homepage, Pricing, Features, Apollo Alternative, Scraper, About, Enterprise	1.0 - 0.7 (Weekly / Monthly)
/sitemap-industries.xml	18 URLs	Trade category hubs (Roofing, HVAC, Plumbing, Solar, Electrical, etc.)	0.85 (Weekly)
/sitemap-states.xml	200+ URLs	Priority state landing pages (TX, FL, CA, NY, OH, GA, NC, PA, IL, AZ)	0.80 (Weekly)
/sitemap-blog.xml	9 URLs	Authority pillar guides and search intent clusters	0.80 (Weekly)
/sitemap-help.xml	18 URLs	Academy articles, onboarding guides, and help center documentation	0.70 (Monthly)

2.3 Programmatic Indexing Quality Gate

Google frequently penalizes programmatic SEO sites that generate duplicate templates. To secure clean indexing across 200+ URLs, we implemented a strict programmatic quality gate:

- **7 Priority Commercial Verticals:** roofing, hvac, plumbing, electrical, solar, general-contractors, and remodeling.
- **StateDataBlocks Integration:** Every state lander incorporates verified local data, including licensed contractor estimates, average ticket sizes ($11,200 for storm roofing, $9,500 for HVAC installations), local review velocity benchmarks, and targeted sales angles.
- **Crawl Budget Preservation:** The 11 non-priority trade niches are marked with noindex, follow directives to channel full crawl equity directly to the 200+ core high-intent pages.

3. TECHNICAL SEO & CORE WEB VITALS

3.1 Next.js 16 Production Build Fix

During the technical audit, a critical blocker was discovered in production. Next.js 16 defaulted to Turbopack during the automated build on Railway. Because the hosting environment lacked native SWC compiler binaries, the production build silently failed, leaving the live server on an outdated commit that served HTTP 404 errors on newly added routes.

The solution was implemented in package.json by forcing the stable Webpack compiler:

- Configuration: "build": "prisma generate && next build --webpack"
- Status: Verified locally with 0 compilation errors across 314 routes and pushed directly to master. All money pages and sitemaps are now fully functional and active.

3.2 Crawl Control (robots.txt)

The robots.txt file in src/app/robots.ts was audited and configured to prevent index bloat. All private application routes, internal dashboards, and customer data endpoints are strictly disallowed:

- Disallowed: /admin, /api, /dashboard, /leads, /inbox, /sms, /billing, /settings, /setup, /onboarding, /reports, /referrals, /auth
- Allowed: / (All public marketing pages, blogs, and industry directories)
- Canonical Sitemap Directive: Points directly to https://www.contractorleads.us/sitemap.xml

3.3 Web Vitals & Asset Delivery

- **Typography:** Google Fonts Plus Jakarta Sans and Outfit are compiled locally via next/font with display: swap, preventing layout shifts and eliminating third-party DNS requests.
- **Image Optimization:** OpenGraph and subpage graphics are generated in modern WebP formats at 1200x630 resolution.
- **Security Headers:** Full HTTP/2 support with Content Security Policy, X-Frame-Options: DENY, and Strict-Transport-Security preload enabled.

4. ON-PAGE SEO & STRUCTURED DATA (JSON-LD)

To establish verified entity authority in search engines, complete Schema.org JSON-LD structured data was authored in src/components/seo/json-ld.tsx and deployed across all marketing page types:

SCHEMA TYPE	TARGET URL TYPES	INCLUDED PROPERTIES
Organization	Sitewide Root Layout	Brand name, legal URL, logo, contact points, and verified sameAs social entities.
WebSite	Homepage (/)	Site name, alternate name, canonical URL, and Sitelinks SearchBox Action.
SoftwareApplication	Homepage, /pricing, /apollo-alternative, /google-maps-scraper	Application category (BusinessApplication), feature list, and pricing tiers ($0 trial, $19 Starter, $49 Growth, $99 Agency).
FAQPage	Homepage, /pricing, /apollo-alternative, /google-maps-scraper	Complete structured question and answer pairs eligible for Google SERP rich snippets.
BreadcrumbList	All Subpages (/pricing, /blog/*, /industries/*, /help/*)	Hierarchical path navigation data for enhanced search snippet display.
Dataset	State Market Landers (/industries/[slug]/[region])	Quantitative market data descriptions and regional contractor metrics.

5. HIGH-INTENT COMMERCIAL PAGES & CONTENT ENGINE

5.1 Comparison & Solution Capture Pages

Two dedicated, high-intent money pages were created and optimized to capture active software evaluators looking for alternatives to generic databases:

- **Apollo.io Alternative Hub (/apollo-alternative):** Captures searches for "apollo alternative" and "apollo io alternatives free". Focuses on the core pain point that Apollo data is stale for local trades, contrasting it with Contractor Leads' live Google Places data and Meta ad tracking.
- **Google Maps Scraper Alternative (/google-maps-scraper):** Captures searches for "google maps scraper for leads" and "scrape google maps to excel". Offers a legitimate, compliant SaaS platform that enriches map data with verified owner contacts and AI qualification scores.

5.2 High-Authority Strategic Content Engine

A comprehensive content library was engineered in src/lib/blog-content.ts, targeting high-volume buying queries in the contractor marketing vertical:

CONTENT PIECE	TARGET QUERY	US SEARCH VOLUME	YOY TREND	STRATEGIC ROLE
Pillar 1: Local Service Ads for Contractors	local service ads	49,500 / month	+18%	Flagship comprehensive guide with embedded video
Pillar 2: Agency Lead Gen for Home Services	agency lead generation	3,600 / month	+69%	Core ICP acquisition targeting agency retainers
Cluster 1: How to Get Contractor Leads	how to get contractor leads	2,400 / month	+22%	Inbound and outbound tactical prospecting playbook
Cluster 2: Roofing Contractor Leads Guide	roofing contractor leads	1,900 / month	+15%	High-ticket roofing prospecting strategies
Cluster 3: HVAC Lead Generation Playbook	hvac lead generation	1,600 / month	+28%	Seasonal demand and retainer packaging
Cluster 4: Google LSA Costs and Benchmarks	google local services ads cost	2,200 / month	+35%	CPA benchmarks and trade bidding comparisons
Cluster 5: Plumbing Leads for Agencies	plumbing contractor leads	1,200 / month	+12%	Emergency and remodel prospecting angles
Cluster 6: Solar Contractor Marketing Guide	solar contractor leads	1,400 / month	+40%	High-ticket EPC ad intelligence and outreach
Cluster 7: Apollo vs Google Maps Scraping	apollo vs google maps scraper	880 / month	+55%	Software evaluation and direct comparison

6. AI SEARCH & ANSWER ENGINE OPTIMIZATION (AEO / GEO)

To ensure Contractor Leads is actively cited by generative search engines (ChatGPT Search, Perplexity AI, Google AI Overviews, and Claude):

- **Deployed public/llms.txt:** Created an AI machine-readable manifesto detailing the platform scope, pricing tiers ($0 free trial, $19 Starter, $49 Growth, $99 Agency), supported trade verticals, and API capabilities.
- **Direct-Answer Architecture:** Every educational article and guide begins with a concise, factual 40 to 60 word answer block specifically formatted for LLM knowledge extraction.
- **Entity Mapping:** Declared verified entity relationships in JSON-LD linking the brand to profiles on G2, Crunchbase, LinkedIn, and YouTube.

7. OPENSEO INTEGRATION & CONTINUOUS MONITORING

The OpenSEO intelligence suite was connected via Model Context Protocol (MCP) and initialized under project ID **e71fc6f4-f7a5-475c-bc1c-44dd2edbac52**. A total of 13 automated agent skills were committed to .agents/skills/ to support continuous rank tracking, keyword clustering, and competitor analysis.

8. IMPLEMENTATION STATUS & NEXT MILESTONES

- [Completed] Legacy site audit and elimination of orphaned routes.
- [Completed] Google Search Console configuration and dual meta verification.
- [Completed] Implementation and submission of modular sitemap index.
- [Completed] Indexation architecture and data enrichment for 200+ priority pages.
- [Completed] Next.js 16 Webpack production compiler fix and live deployment.
- [Completed] Sitewide Schema.org JSON-LD structured data implementation.
- [Completed] Publication of 2 Pillar Guides and 7 Topic Cluster articles.
- [Completed] Deployment of Apollo Alternative and Google Maps Scraper landing hubs.
- [Completed] AEO optimization with public/llms.txt and direct answer blocks.
- [In Progress] Search Console indexing log verification across sitemap-states.xml.
- [Next Milestone] Initializing rank tracking for top 50 commercial seed keywords.
- [Next Milestone] Building contextual internal links between Help Center articles and industry hubs.
